

Ostrum SRI Credit Euro

FUND FACTSHEET

MARKETING COMMUNICATION - EXCLUSIVELY FOR PROFESSIONAL INVESTORS OR NON-PROFESSIONALS INVESTED IN THE FUND ⁽¹⁾

SHARE CLASS: GP/C (EUR) - FR0013241015

February 2026

Fund highlights

- Credit fund with all maturities, predominantly Investment Grade, certified with the SRI label (Socially Responsible Investment)
- Mainly private entities from the OECD area (currency risk systematically hedged) rated 'Investment Grade', with non-rated and speculative securities up to 20%
- Modified duration between 3 and 7
- Key sources of added value: Active management of directional credit Sector allocation Selection of issuers and issues Diversification through non-index exposure
- Rigorous active analysis of credit quality based on independent proprietary fundamental research, incorporating ESG factors at the core of the investment
- This product promotes environmental or social characteristics but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification
- Minimum proportion of taxonomy alignment: 5%
- Minimum proportion of sustainable investments: 40%
- SFDR Classification : Art. 8

5 years	0.30	0.38
Since inception	1.00	1.18

ANNUALISED PERFORMANCE (%) (Quarter end)	Fund	Reference Index
3 years	5.56	5.27
5 years	-0.20	-0.06
Since inception	0.87	1.05

Some recent performance may be lower or higher. As the value of the capital and the returns change over time (notably due to currency fluctuations), the repurchase price of the shares can be higher or lower than their initial price. The performance indicated is based on the NAV (net asset value) of the share class, and is net of all charges applying to the fund but does not account for sale commissions, taxation or paying agent fees, and assumes that dividends if any are reinvested. Taking such fees or commissions into account would lower the returns. The performance of other share classes would be higher or lower based on the differences between the fees and the entry charges. In the periods where certain share classes are not subscribed or not yet created (inactive share classes), performance is calculated based on the actual performance of an active share class of the fund whose characteristics are considered by the management company as being closest to the inactive share class concerned, after adjusting it for the differences between the total expense ratios (TER), and converting any net asset value of the active share class in the currency in which the inactive share class is listed. The performance given for the inactive share class is the result of a calculation provided for information.

Please read the important information given in the additional notes at the end of this document.

⁽¹⁾ Please refer to the prospectus of the fund and to the KID before making any final investment decisions.

References to a ranking, prize or label do not anticipate the future results of the latter, or of the fund, or of the manager.

ABOUT THE FUND

Investment objective

The Fund has a dual investment objective: it seeks to outperform its Reference Index net coupons reinvested; implement a Socially Responsible Investment (SRI) strategy

RISK PROFILE

Lower risk	Higher risk
1	7

The category of the summary risk indicator is based on historical data.

Due to its exposure to fixed income markets, the Fund may experience medium volatility, as expressed by its rank on the above scale.

The Fund investment policy exposes it primarily to the following risks:

- Change in interest rate
- Risk associated with investments in contingent convertible bonds
- Counterparty risk
- Credit risk
- Currency risk
- Equity securities
- Liquidity risk
- Specific risk of securitisation instruments (ABS ...)
- Risk related to temporary sales and repurchases of securities and the management of financial guarantees
- Risk of holding securities with a low or no credit rating
- Risk related to holding convertible bonds

The Fund is subject to sustainability risks.

For more information, please refer to the section detailing specific risks at the end of this document.

¹ In the absence of an external rating, the proprietary scores - defined by Ostrum AM credit research based on an internal rating methodology - will apply. The Ostrum AM scores are forward-looking to 3 years and provide an indication of the company's level of credit risk and its volatility over time. To facilitate comparisons and enable average portfolio ratings to be determined, these scores are translated into S&P equivalents.

AVERAGE SCORE	Fund	Filtered SRI investment universe
Average score	7.4	7.4
Coverage rate (%)	93	96

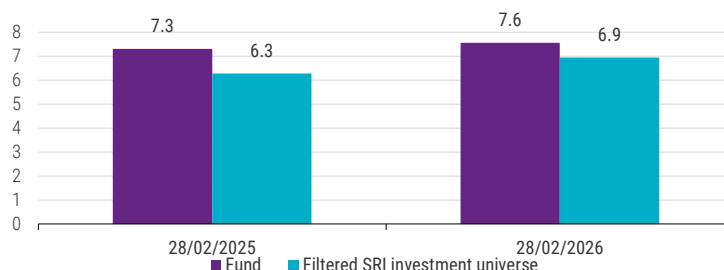

DEFINITION		
Type	Indicator	Definition
Corporates issuers	GREaT extra-financial rating	GREaT extra-financial rating: calculated on the basis of an external methodology proprietary to LBP AM. Analysis based on 4 pillars (responsible governance, sustainable management of natural and human resources, energy transition, regional development), using around 60 indicators. A rating of 10 corresponds to the highest extra-financial quality and 1 to the lowest. As this rating method is based on a large number of indicators, it is possible that the portfolio will not, at all times, have a better rating than the benchmark.

OBJECTIVES

The objectives sought by taking ESG criteria into account within the fund regarding the part of private issuers:

Ostrum AM has integrated the analysis of environmental, social, and governance risks and opportunities into its evaluation of companies for many years, enabling it to finance and invest in businesses that contribute to sustainable and responsible development. By taking ESG criteria into account, the fund ensures that its investment choices are aligned with sustainable values and long-term objectives. The objectives for the 3 pillars 'Private Issuers' are as follows:

Pillars	Definitions	Provider
Environment (E)	Ensure that the companies in which the fund invests implement environmental practices aimed at promoting the transition to a low-carbon economy.	Trucost - S&P
Social (S)	Ensure the proper representation of women at all hierarchical levels of the company in order to minimize the gender pay gap.	MSCI
Governance (G)	Ensure that the companies in which the fund invests adopt responsible governance practices.	MSCI

Source: Trucost - S&P: <https://www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf>

Source: MSCI: <https://www.msci.com>

Scope 1: Greenhouse gas emissions from the combustion of fossil fuels and production processes owned or controlled by the company.

Scope 2: Indirect greenhouse gas emissions related to the company's energy consumption.

Scope 3 (upstream): Other greenhouse gas emissions associated with a company's activities but not directly owned or controlled by the company. Scope 3 emissions therefore include several sources of indirect emissions in the company's supply chain.

Source: Trucost

Ostrum AM uses Trucost to obtain all carbon intensities for corporates and sovereigns. To obtain this data, Trucost collects greenhouse gas emissions through a variety of public sources, such as company financial reports, environmental data sources and data published on company websites or other public sources. Where no published data is available, Trucost's Extended Environmental Input-Output (EEIO) model combines industry-specific environmental impact data with quantitative macroeconomic data on the flow of goods and services between different sectors of the economy to obtain an estimated carbon emissions figure. Once the intensity of each emitter has been obtained, each portfolio's carbon intensity is calculated by summing the intensity of each emitter, weighted by its contribution to the portfolio. This figure corresponds to the Weighted Average Carbon Intensity (WACI), as recommended by the TCFD. Carbon intensity measures the volume of carbon emissions per dollar of turnover generated by the issuers in the portfolio over a given period. Further information on the methodology is available here: <https://www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf>

1. **Average carbon intensity of the fund** is the sum of the corporate carbon intensities weighted by portfolio weights.

2. The calculation of the average carbon intensity of the portfolio only takes into account the securities of private issuers held in our internal funds.

3. Represents the company's % contribution to the average carbon intensity of the portfolio.

4. Represents the number of tons of CO₂ emitted by the company on Scope 1 and Scope 2 and Scope 3.

Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation. For more information about the implications of France's Law on Energy and Climate (Loi Energie Climat), please read Ostrum AM's latest report available on the Ostrum AM website. Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

Application of performance during periods of share class inactivity (if applicable)

For periods when certain share classes were unsubscribed or not yet created (the "inactive share classes"), performance is imputed using the actual performance of the fund's active share class which has been determined by the management company as having the closest characteristics to such inactive share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active share class into the currency of quotation of the inactive share class. The quoted performance for such inactive share class is the result of an indicative calculation.

Illustrative Growth of 10,000

The graph compares the growth of 10,000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

Risk Measures

The "Summary Risk Indicator" (SRI), as defined by the PRIIPs regulation, is a risk measure based on both market risk and credit risk. It is based on the assumption that you stay invested in the fund for the recommended holding period. It is calculated periodically and may change over time. The indicator is presented on a numerical scale from 1 (the lowest risk) to 7 (the highest risk). The risk measures below are calculated for funds with at least a three-year history.

Standard deviation is a statistical measure of the volatility of the fund's returns.

Tracking Error is reported as a standard deviation percentage difference between the performance of the portfolio and the performance of the reference index. The lower the Tracking Error, the more the fund performance resembles to the performance of its reference index.

The Sharpe ratio uses standard deviation and excess return to determine reward per unit of risk.

The Information Ratio is the difference between the fund's average annualized performance and the reference index divided by the standard deviation of the Tracking Error. The information ratio measures the portfolio manager's ability to generate excess returns relative to the reference index.

Alpha measures the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market.

R-squared reflects the percentage of a fund's movements that are explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark. This figure is also helpful in assessing how likely it is that alpha and beta are statistically significant.

Morningstar Rating and Category

© 2026 Morningstar. All Rights Reserved. The information, data, analyses and opinions ("Information") contained herein (1) include Morningstar's confidential and proprietary information (2) may not be copied or redistributed, (3) do not constitute investment advice (4) are provided solely for informational purposes (5) are not warranted to be complete, accurate or timely and (6) are drawn from fund data published on various dates. The information is provided to you at your own risk. Morningstar is not responsible for any trading decisions, damages or other losses related to the Information or its use. Please verify all of the Information before using it and don't make any investment decision except upon the advice of a professional financial adviser. Past performance is no guarantee of future results. The value and income derived from investments can go up or down. The Morningstar rating applies to funds having at least 3 years of history. It takes into account subscription fee, the yield without risk and the standard deviation to calculate for every fund its ratio MRAR (Morningstar Risk Adjust Return). Funds are then classified in decreasing order by MRAR: first 10 percent receive 5 stars, the following 22.5 percent 4 stars, the following 35 percent 3 stars, following 22.5 percent 2 stars, the last 10 percent receive 1 star. Funds are classified within 180 European categories.

Reference Index

The Sub-Fund is actively managed. The Reference Index is used for comparison purposes only. The Delegated Investment Manager remains free to choose the securities that make up the portfolio in accordance with the Sub-Fund's investment policy.

Asset allocation

Cash offset for Derivatives represents the amount of cash the portfolio manager should borrow if he is Long exposed via derivatives and vice versa. The weighting of the portfolio in various asset classes, including "Other," is shown in this table. "Other" includes security types that are not neatly classified in the other asset classes, such as convertible bonds and preferred stocks. In the table, allocation to the classes is shown for long positions, short positions, and net (long positions net of short) positions. These statistics summarize what the managers are buying and how they are positioning the portfolio. When short positions are captured in these portfolio statistics, investors get a more robust description of the funds' exposure and risk.

Fund Charges: The "All-in Fee" is defined as the aggregate of Management Fees and Administration Fees paid annually by each Sub-Fund, other than taxes (such as "Taxe d'abonnement") and expenses relating to the creation or liquidation of any Sub-Fund or Share Class; the All-in Fee shall not exceed such percentage of each Sub-Fund's average daily net asset value as indicated in each Sub-Fund's description under "Characteristics." The All-in Fee paid by each Share Class, as indicated in each Sub-Fund's description, does not necessarily include all the expenses linked to the FCP's investments (such as the tax d'abonnement, brokerage fees, expenses linked to withholding tax reclaims) that are paid by such FCP. Unless otherwise provided for in any Sub-Fund's description, if the yearly actual expenses paid by any Sub-Fund exceed the applicable All-in Fee, the Management Company will support the difference and the corresponding income will be recorded under Management Company fees in the FCP's audited annual report. If the yearly actual expenses paid by each Sub-Fund are lower than the applicable All-in Fee, the Management Company will keep the difference and the corresponding charge will be recorded under Management Company fees in the FCP's audited annual report.

Equity Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long equity holdings in the portfolio. The Price/Earnings ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-month earnings per share. The Price/Cash Flow ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/cash flow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency. The Price/Book ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation. Dividend Yield is the rate of return on an investment expressed as a percent. Yield is calculated by dividing the amount you receive annually in dividends or interest by the amount you spent to buy the investment.

Fixed-Income Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long fixed-income holdings in the portfolio. Duration measures the sensitivity of a fixed income security's price to changes in interest rates. Average maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security. Modified Duration is inversely related to percentage change in price on an average for a specific change in yield. The average coupon corresponds to the individual coupon of each bond in the portfolio, weighted by the nominal amount of these very same securities. The average coupon is calculated only on fixed-rate bonds. The Yield to maturity (YTM) reflects the total return of a bond, if the bond is held until maturity, considering all the payments are reinvested at the same rate. This indicator can be calculated at the portfolio level, by weighting the individual YTM by the market value of each bond.

Labels

SRI Label: Created by the French Ministry of Finance in early 2016, with the support of Asset Management professionals, this public Label aims at giving Sustainable Responsible Investment (SRI) management an extra visibility with savers. It will make it easier for investors to identify financial products integrating Environmental, Social, and Governance (ESG) criteria into their investment process. To qualify for certification, funds must satisfy several requirements, including: - Transparency vis-à-vis investors (in terms of investment objectives and process, analysis, portfolio holdings, etc.), - Use of ESG criteria in investment decision making, - Long-term approach to investing, - Consistent voting and engagement policy, - Measured and reported positive impacts. More information on www.lelabelisr.fr.

Special Risk Considerations

Change in interest rate: The value of fixed income securities held by a fund will rise or fall inversely with changes in interest rates. When interest rates decline, the market value of fixed income securities tends to increase. Interest rates typically vary from one country to the next for reasons including rapid fluctuations of a country's money supply, changes in demand by businesses and consumers to borrow money, and actual or anticipated changes in the rate of inflation.

Risk associated with investments in contingent convertible bonds: The Fund may invest in subordinated debt known as "contingent convertibles": fixed-income securities that include either an equity conversion option or a security depreciation option which is exercised if the issuer's level of capital falls below a predetermined threshold. In addition to the credit risk and interest rate risk inherent to bonds, the activation of this option may cause the Fund's net asset value to fall more significantly than would be caused by other conventional bonds from the issuer.

Counterparty risk: The Fund uses over-the-counter derivatives and/or temporary sales and repurchases of securities. These transactions, undertaken with one or more eligible counterparties, potentially expose the Fund to the risk that one of its counterparties could fail, which could lead to a default in payment.

Credit risk: (the risk of the fund's net asset value falling due to an increase in the yield spreads of private issues in the portfolio, or even a default on an issue), as certain alternative management strategies (interest rate arbitrage, distressed securities, convertible arbitrage and global macro in particular) may be exposed to credit. Increases in the yield spreads of private issues in the portfolio, or even a default on an issue, may cause the fund's net asset value to fall.

Currency risk: The risk of a fall in a currency other than the euro for a security included in the Fund's portfolio compared to the euro (the Fund's reference currency). The Fund may incur a currency risk as a result of positions in its portfolio denominated in currencies other than the euro. It should also be noted that the use of financial instruments to hedge currency risk entails a cost to the Fund. In this case, as securities denominated in a currency other than the euro are systematically hedged against currency risk, the Fund's exposure currency risk will be residual.

Equity securities: Equity securities are volatile and can decline significantly in response to broad market and economic conditions.

Liquidity risk: the liquidity risk, which may arise in the event of large-scale redemptions of fund units, is tied to the difficulty in closing out positions under optimal financial conditions.

Specific risk of securitisation instruments (ABS ...): for such instruments, credit risk is based mainly on the quality of the underlying assets which, by nature, can vary (bank receivables, debt instruments, etc.). Such instruments are the result of complex structures that may comprise legal risks and specific risks tied to the characteristics of the underlying assets. If such risks are realised, this may cause the fund's net asset value to fall.

Risk related to temporary sales and repurchases of securities and the management of financial guarantees: temporary sales and repurchases of securities are likely to create risks for the Fund, such as counterparty risk defined above. The management of guarantees may create risks for the Fund, such as liquidity risk (i.e., the risk that a security received as collateral is not sufficiently liquid and cannot be sold quickly if the counterparty defaults) and, where applicable, the risks associated with the re-use of cash deposited as collateral (i.e., mainly the risk that the Fund cannot repay the counterparty).

Risk of holding securities with a low or no credit rating: the Fund reserves the right to hold securities with a low or no credit rating. Thus, the use of "high yield securities" (securities with a higher risk of default and higher volatility) may lead to a significant decrease in the net asset value of the Fund.

Risk related to holding convertible bonds: the value of convertible bonds depends on several factors including any changes in interest rates, in the price of the underlying shares and in the price of the option embedded in a convertible bond. These different elements may lead to a decrease in the net asset value of the Fund.

Please refer to the full prospectus, for additional details on risks.

Distribution of this document may be restricted in certain countries. The fund is not authorized for sale in all jurisdictions and its offering and sale may be limited by the local regulator to certain types of investors. Natixis Investment Managers International or its affiliates may receive or pay fees or rebates in relation to the fund. The tax treatment relating to the holding, acquisition or disposal of shares or units in the fund depend on each investor's tax status or treatment and may be subject to change. Please ask your financial advisor if you have any questions. It is the responsibility of your financial advisor to ensure that the offering and sale of fund shares complies with the relevant national law.

The fund may not be offered or sold in the USA, to citizens or residents of the USA, or in any other country or jurisdiction where it would be unlawful to offer or sell the fund.

This material has been provided for information purposes only to investment service providers or other Professional Clients, Qualified or Institutional Investors and, when required by local regulation, only at their written request. This material must not be used with Retail Investors. It is the responsibility of each investment service provider to ensure that the offering or sale of fund shares or third party investment services to its clients complies with the relevant national law.

Please read the Prospectus and Key Information Document carefully before investing. If the fund is registered in your jurisdiction, these documents are also available free of charge and in the official language of the country of registration at the Natixis Investment Managers website (im.natixis.com/intl/intl-fund-documents).

To obtain a summary of investor rights in the official language of your jurisdiction, please consult the legal documentation section of the website (im.natixis.com/intl/intl-fund-documents).
