ABOUT THE FUND

Investment objective

The sustainable investment objective of Thematics Safety Fund is to contribute to the protection of assets, data, goods and people's health while generating long-term growth of capital through an investment process systematically including Environmental, Social and Governance ("ESG") considerations.

The achievement of the extra-financial investment objective is based on the results of the assumptions made by the delegated investment manager.

RISK PROFILE

Lower risk	1	2	3	4	5	6	7	Higher risk
------------	---	---	---	---	---	---	---	-------------

The category of the summary risk indicator is based on historical data.

Due to its exposure to equity markets, the Fund may experience significant volatility, as expressed by its rank on the above scale.

The Fund investment policy exposes it primarily to the following risks:

- Changes in Laws and/or Tax Regimes
- Emerging markets risk
- Equity securities
- ESG driven investments
- Exchange Rates
- Geographic concentration risk
- Risks related to global investing
- Risk Large Capitalization Companies
- Portfolio Concentration risk
- Smaller Capitalization risk
- Stock Connect risk
- Real Estate Securities and REITs
- Sustainability risk

The Fund is subject to sustainability risks.

For more information, please refer to the section detailing specific risks at the end of this document.

PERFORMANCE DATA SHOWN REPRESENTS PAST PERFORMANCE AND IS NOT A GUARANTEE OF FUTURE RESULTS. Some recent performance may be lower or higher. As the value of the capital and the returns change over time (notably due to currency fluctuations), the repurchase price of the shares can be higher or lower than their initial price. The performance indicated is based on the NAV (net asset value) of the share class, and is net of all charges applying to the fund but does not account for sale commissions, taxation or paying agent fees, and assumes that dividends if any are reinvested. Taking such fees or commissions into account would lower the returns. The performance of other share classes would be higher or lower based on the differences between the fees and the entry charges. In the periods where certain share classes are not subscribed or not yet created (inactive share classes), performance is calculated based on the actual performance of an active share class of the fund whose characteristics are considered by the management company as being closest to the inactive share class concerned, after adjusting it for the differences between the total expense ratios (TER), and converting any net asset value of the active share class in the currency in which the inactive share class is listed. The performance given for the inactive share class is the result of a calculation provided for information.

Please read the important information given in the additional notes at the end of this document.

⁽¹⁾ Please refer to the prospectus of the fund and to the KID before making any final investment decisions.

Thematics Safety Fund

Fund sustainability report as of 30/05/2025

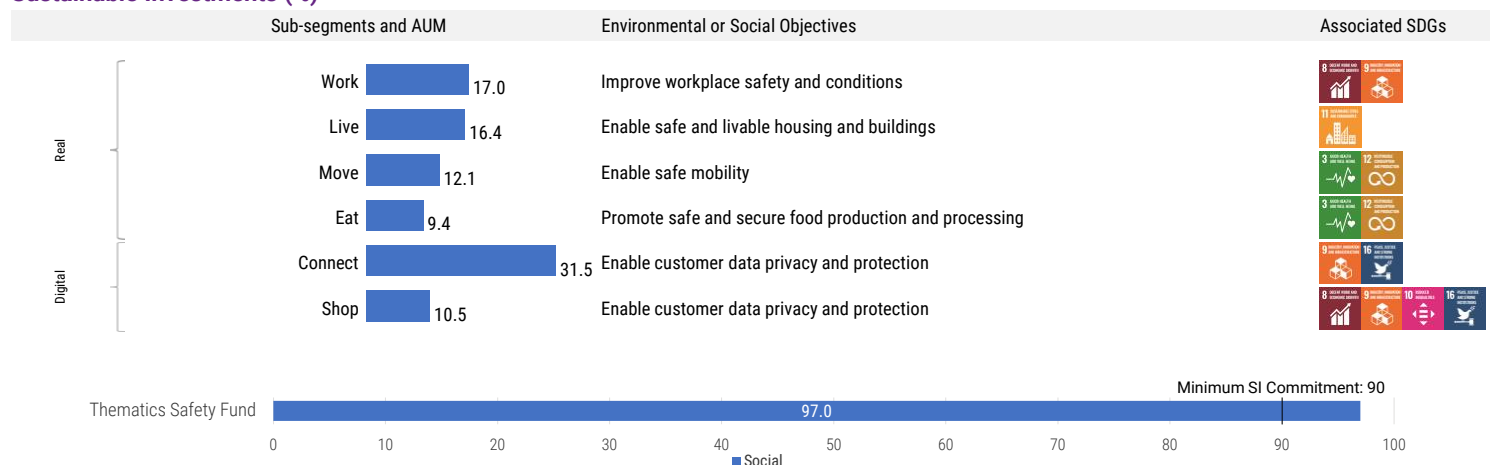

Sustainability Strategy

The sustainable investment objective of the Fund is help improve safety standards and/or reduce risks in many aspects of everyday life, such as food production, mobility, living, working, and real and digital economic participation.

Contribution to the Fund's sustainable investment objective is assessed based on a sustainable thematic screening, as well as on a proprietary ESG assessment which relies, amongst others, on the ESG score of the securities. In addition, the Fund also applies exclusion criteria including inter alia, activity-based and behaviour-based exclusions. Finally, the Fund has internally defined the implementation of an engagement process, which also encompasses the exercising of its voting rights. The combination of the different elements in this screening process allows to identify investment's contribution to the sustainable investment objective.

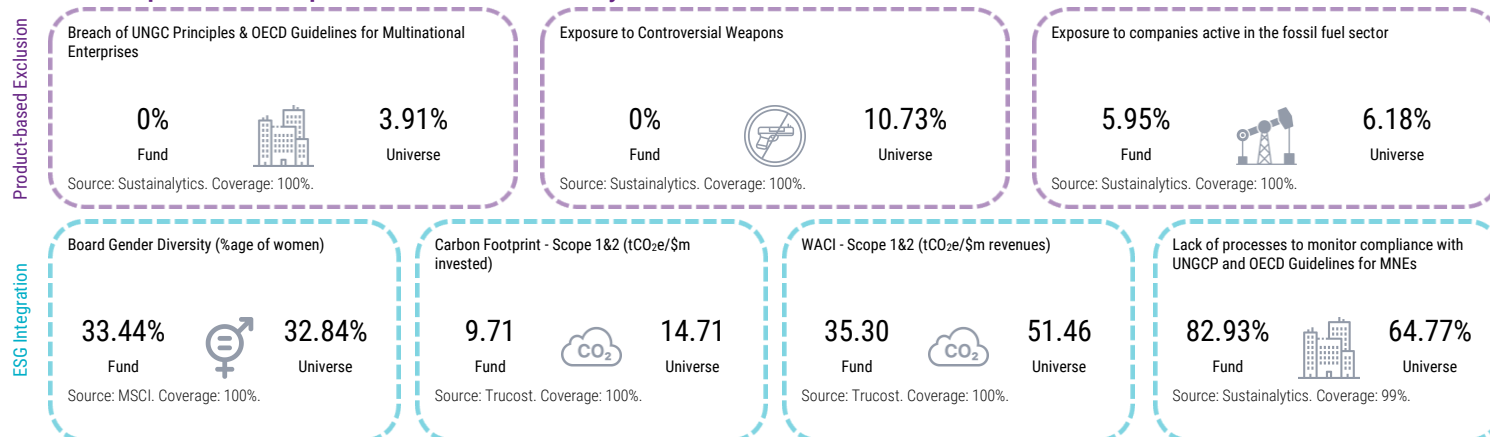

- Sustainable Thematic Screening
- Product-based Exclusion
- Behaviour-based Assessment
- ESG Integration
- Active Ownership

Sustainable Investments

As defined in the EU Sustainable Finance Disclosure Regulation (EU SFDR), 'sustainable investment' means an investment in an economic activity that contributes to an environmental objective, [...] or an investment in an economic activity that contributes to a social objective [...] provided that such investments do not significantly harm any of those objectives and that the investee companies follow good governance practices, [...]. Thematics AM has built its proprietary thematic screening framework, which defines the themes (within its thematic investing focus and scope) that it qualifies as contributing to environmental and social objectives, as well as the methodology to quantify these objectives. This framework defines the environmental or social objectives at the subsegment level of each thematic Fund. Consequently, the percentage of sustainable investments is calculated at subsegment level, where assets comprising the subsegment that are defined as contributing to an environmental or social objectives represent the Fund's contributions. Details of this screening framework is detailed in our Thematic Screening Policy, available [here](#).

Select Principal Adverse Impact and Other Sustainability Indicators

Principal Adverse Impact (PAI) indicators are a set of metrics that intend to show how certain business investments affect the environment and broader community. PAIs measure sustainability risks. The EU SFDR reporting requires the disclosure of PAI indicators, which are divided into "mandatory indicators" and "additional indicators". Thematics AM reports on selected PAI considered the most material and with credible available data from third-party (Sustainalytics).

Controversies

The Controversies chart plots the percentage of the Fund's assets under management exposed to incidents that have negative environmental, social, and governance implications in a 5-scale impact level, from 0 (Low impact) to 5 (Severe impact). The data is sourced from Sustainalytics Controversies Research, which monitors and screens published controversial news stories involving companies on a daily basis across global platforms. The analyses focus on material ESG pillars, including Environmental supply chain, Social incidents, and Business ethics, among others. The highest level of controversy is attributed to a company in case it is subject to several controversies. The numbers presented are the most up to date available at the time of the report.

Implied Temperature Rise

The implied temperature rise metric measures the alignment of a company with a given climate scenario defined by the Intergovernmental Panel on Climate Change or the International Energy Agency. These data are reported or assessed by S&P Trucost.

Calculation of performance during periods of share class inactivity (if applicable)

For periods when certain share classes were unsubscribed or not yet created (the "inactive share classes"), performance is imputed using the actual performance of the fund's active share class which has been determined by the management company as having the closest characteristics to such inactive share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active share class into the currency of quotation of the inactive share class. The quoted performance for such inactive share class is the result of an indicative calculation.

Illustrative Growth of 10,000

The graph compares the growth of 10,000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

Risk Measures

The "Summary Risk Indicator" (SRI), as defined by the PRIIPs regulation, is a risk measure based on both market risk and credit risk. It is based on the assumption that you stay invested in the fund for the recommended holding period. It is calculated periodically and may change over time. The indicator is presented on a numerical scale from 1 (the lowest risk) to 7 (the highest risk). The risk measures below are calculated for funds with at least a three-year history.

Standard deviation is a statistical measure of the volatility of the fund's returns.

Tracking Error is reported as a standard deviation percentage difference between the performance of the portfolio and the performance of the reference index. The lower the Tracking Error, the more the fund performance resembles to the performance of its reference index.

The Sharpe ratio uses standard deviation and excess return to determine reward per unit of risk.

The Information Ratio is the difference between the fund's average annualized performance and the reference index divided by the standard deviation of the Tracking Error. The information ratio measures the portfolio manager's ability to generate excess returns relative to the reference index.

Alpha measures the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market.

R-squared reflects the percentage of a fund's movements that are explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark. This figure is also helpful in assessing how likely it is that alpha and beta are statistically significant.

Morningstar Rating and Category

© 2025 Morningstar. All Rights Reserved. The information, data, analyses and opinions ("Information") contained herein (1) include Morningstar's confidential and proprietary information (2) may not be copied or redistributed, (3) do not constitute investment advice (4) are provided solely for informational purposes (5) are not warranted to be complete, accurate or timely and (6) are drawn from fund data published on various dates. The information is provided to you at your own risk. Morningstar is not responsible for any trading decisions, damages or other losses related to the Information or its use. Please verify all of the Information before using it and don't make any investment decision except upon the advice of a professional financial adviser. Past performance is no guarantee of future results. The value and income derived from investments can go up or down. The Morningstar rating applies to funds having at least 3 years of history. It takes into account subscription fee, the yield without risk and the standard deviation to calculate for every fund its ratio MRAR (Morningstar Risk Adjust Return). Funds are then classified in decreasing order by MRAR: first 10 per cent receive 5 stars, the following 22.5 % 4 stars, the following 35 % 3 stars, following 22.5 % 2 stars, the last 10 % receive 1 star. Funds are classified within 180 European categories.

Asset allocation

Cash offset for Derivatives represents the amount of cash the portfolio manager should borrow if he's Long exposed via derivatives and vice versa. The weighting of the portfolio in various asset classes, including "Other," is shown in this table. "Other" includes security types that are not neatly classified in the other asset classes, such as convertible bonds and preferred stocks. In the table, allocation to the classes is shown for long positions, short positions, and net (long positions net of short) positions. These statistics summarize what the managers are buying and how they are positioning the portfolio. When short positions are captured in these portfolio statistics, investors get a more robust description of the funds' exposure and risk.

Fund Charges: The "All-in Fee" is defined as the aggregate of Management Fees and Administration Fees paid annually by each Sub-Fund, other than taxes (such as "Taxe d'abonnement") and expenses relating to the creation or liquidation of any Sub-Fund or Share Class; the All-in Fee shall not exceed such percentage of each Sub-Fund's average daily net asset value as indicated in each Sub-Fund's description under "Characteristics." The All-in Fee paid by each Share Class, as indicated in each Sub-Fund's description, does not necessarily include all the expenses linked to the SICAV's investments (such as the tax d'abonnement, brokerage fees, expenses linked to withholding tax reclaims) that are paid by such SICAV. Unless otherwise provided for in any Sub-Fund's description, if the yearly actual expenses paid by any Sub-Fund exceed the applicable All-in Fee, the Management Company will support the difference and the corresponding income will be recorded under Management Company fees in the SICAV's audited annual report. If the yearly actual expenses paid by each Sub-Fund are lower than the applicable All-in Fee, the Management Company will keep the difference and the corresponding charge will be recorded under Management Company fees in the SICAV's audited annual report.

Equity Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long equity holdings in the portfolio. The Price/Earnings ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-months' earnings per share. The Price/Cash Flow ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/ cashflow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency. The Price/Book ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation. Dividend Yield is the rate of return on an investment expressed as a percent. Yield is calculated by dividing the amount you receive annually in dividends or interest by the amount you spent to buy the investment.

Fixed-Income Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long fixed income holdings in the portfolio. Duration measures the sensitivity of a fixed income security's price to changes in interest rates. Average maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security. Modified Duration is inversely related to percentage change in price on an average for a specific change in yield. The average coupon corresponds to the individual coupon of each bond in the portfolio, weighted by the nominal amount of these very same securities. The average coupon is calculated only on fixed rate bonds. The Yield to maturity (YTM) reflects the total return of a bond, if the bond is held until maturity, considering all the payments are reinvested at the same rate. This indicator can be calculated at the portfolio level, by weighting the individual YTM by the market value of each bond.

Labels

SRI Label: Created by the French Ministry of Finance in early 2016, with the support of Asset Management professionals, this public Label aims at giving Sustainable Responsible Investment (SRI) management an extra visibility with savers. It will make it easier for investors to identify financial products integrating Environmental, Social, and Governance (ESG) criteria into their investment process. To qualify for certification, funds must satisfy several requirements, including: - Transparency vis-à-vis investors (in terms of investment objectives and process, analysis, portfolio holdings, etc.), - Use of ESG criteria in investment decision making, - Long-term approach to investing, - Consistent voting and engagement policy, - Measured and reported positive impacts. More information on www.lelabelisr.fr

Towards-Sustainability Febelfin, Belgian Federation of the Financial Sector, is a federation of Belgian financial institutions, founded in 2003 and headquartered in Brussels, aiming to reconcile the interests of all its members with those of political decision-makers, supervisory authorities, other professional associations and interest groups at national and European level. Febelfin developed a quality standard in February 2019 to ensure clarity and transparency regarding sustainable investments. The "Towards-Sustainability" label was developed by the association representing the banking sector in Belgium. Methodology available on www.towardsustainability.be/en/quality-standard.

Special Risk Considerations

Changes in Laws and/or Tax Regimes: Each Fund is subject to the laws and tax regime of Luxembourg. The securities held by each Fund and their issuers will be subject to the laws and tax regimes of various other countries. Changes to any of those laws and tax regimes, or any tax treaty between Luxembourg and another country, could adversely affect the value of any Fund holding those securities.

Emerging markets risk: Funds investing in emerging markets may be significantly affected by adverse political, economic or regulatory developments. Investing in emerging markets may not provide the same degree of investor protection or information to investors as would generally apply in major securities markets. In addition, exchanges in emerging markets may be very fluctuating. Finally, funds may not be able to sell securities quickly and easily in emerging markets.

Equity securities: Equity securities are volatile and can decline significantly in response to broad market and economic conditions.

ESG driven investments: Environmental, social and governance ("Sustainable ESG") criteria are part of the investment policy. Sustainable ESG criteria aim to better manage risk, and generate sustainable, long-term returns. Applying Sustainable ESG criteria to the investment process may lead the Delegated Investment Manager to invest in or exclude securities for non-financial reasons, irrespective of market opportunities available if assessed while disregarding Sustainable ESG criteria.

Exchange Rates: Some Funds are invested in currencies other than their reference currency. Changes in foreign currency exchange rates will affect the value of those securities held by such Sub-Funds. For unhedged Share Classes denominated in currencies different than the Fund's currency, exchange rate fluctuations can generate additional volatility at the Share Class level.

Geographic concentration risk: Funds that concentrate investments in certain geographic regions may suffer losses, particularly when the economies of those regions experience difficulties or when investing in those regions become less attractive. Moreover, the markets in which the funds' invest may be significantly affected by adverse political, economic or regulatory developments.

Risks related to global investing: International investing involves certain risks such as currency exchange rate fluctuations, political or regulatory developments, economic instability and lack of information transparency. Securities in one or more markets may also be subject to limited liquidity. These factors may have an adverse impact on the performance of the Fund.

Risk Large Capitalization Companies: Funds investing in large capitalization companies may underperform certain other stock funds during periods when large company stocks are generally out of favour.

Portfolio Concentration risk: Funds investing in a limited number of securities may increase the fluctuation of such funds' investment performance. If such securities perform poorly, the fund could incur greater losses than if it had invested in a larger number of securities.

Smaller Capitalization risk: Funds investing in companies with small capitalizations may be particularly sensitive to wider price fluctuations, certain market movements and less able to sell securities quickly and easily.

Stock Connect risk: The Fund may invest in China "A" shares via the Shanghai-Hong Kong Stock Connect and/or Shenzhen-Hong Kong Stock Connect programs which are subject to additional clearing and settlement constraints, potential regulatory changes as well as operational and counterparty risks.

Real Estate Securities and REITs: Some Funds may invest in equity securities of companies linked to the real estate industry or publicly traded securities of closed-ended Real Estate Investment Trusts (REIT's). REITs are companies that acquire and/or develop real property for long term investment purposes. They invest the majority of their assets directly in real property and derive their income primarily from rents.

Sustainability risk: The Fund is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment. More information on the framework related to the incorporation of sustainability risks can be found on the website of the Management Company and the Delegated Investment Manager.

Please refer to the full prospectus, for additional details on risks.

The fund is a sub-fund of Natixis International Funds (Lux) I which is organized as an investment company with variable capital under the laws of the Grand Duchy of Luxembourg and is authorized by the financial regulator (the CSSF) as a UCITS - 2-8 avenue Charles de Gaulle, L1653 Luxembourg - RCS Luxembourg B 53023.

Natixis Investment Managers International - a portfolio management company authorized by the Autorité des Marchés Financiers (French Financial Markets Authority - AMF) under no. Additional Notes

This document is provided by Natixis Investment Managers Singapore Limited (Company Registration No. 199801044D). The Fund has been recognized under the Securities and Futures Act 2001 of Singapore, and Natixis Investment Managers Singapore Limited is appointed as its Singapore Representative and agent for service of process. Past performance of the Fund or managers, and any economic and market trends or forecast, are not necessarily indicative of the future or likely performance of the Fund or the manager. The value of investments and the income accruing, if any, may rise or fall and investors may lose the full amount invested. Investors investing in funds denominated in non-local currency should be aware of the risk of exchange fluctuations that may cause a loss of principal. Investments in the Fund involve risks, which are fully described in the Prospectus. The Fund may use derivatives for hedging and/or investment purposes. The net asset value of the Fund may be subject to volatility as a result of its investment policy and/or use of financial derivative instruments. Investors should consider the Fund's investment objective, risks, charges, expenses and read the Prospectus and Product Highlights Sheet carefully and discuss with their financial adviser to determine if the investment is appropriate for them before investing. However, if an investor chooses not to seek advice from a financial adviser, he/she should consider whether the product is suitable for him/her. The Prospectus is available for collection from Natixis Investment Managers Singapore Limited at 5 Shenton Way, #22-05/06, UIC Building, Singapore 068808 or any appointed Singapore distributor.

This document is published for information and general circulation only and it does not constitute an offer to anyone or a solicitation by anyone to subscribe for shares of the Fund as it does not have any regard to the specific investment objectives, financial situation and the particular needs of any specific person who may receive this document. Nothing in the document should be construed as advice or a recommendation to buy or sell shares. This advertisement has not been reviewed by the Monetary Authority of Singapore.
